

LAYER 1

Construct-to-metric mapping

What to measure, with which metric

- Fluency → lexical entropy, MATTR
- Originality → surprisal, self-referential novelty
- Flexibility → semantic distance to self
- Engagement → semantic distance to partner
- Process dynamics → trajectory features

LAYER 2

Operationalization methods

How to compute the metrics for dialogue

- Condition every metric on the dialogue history
- Reference every measurement to the speaker's own baseline
- Aggregate from single turns into process-level readouts

LAYER 3

Design principles

How to use and validate the measurement

- Analyse at the dimension level
- Measure self-referentially
- Interpret semantic distance as engagement
- Validate by manipulation and external outcomes
